50 PRO-L

In 1998 we invented the first magnetic construction toy. Simple elements such as magnetic rods and metal spheres held together by the magical force of attraction have allowed us and still allow us to build incredible structures.

Over the years we have got millions of people playing and we have realized that magnetism is just one of the many invisible forces that bring life to the Geomagworld platforms.

Creativity, intelligence, the human mind, magnetism and even gravity are all invisible energies that make the play experience with our products fun and educational.

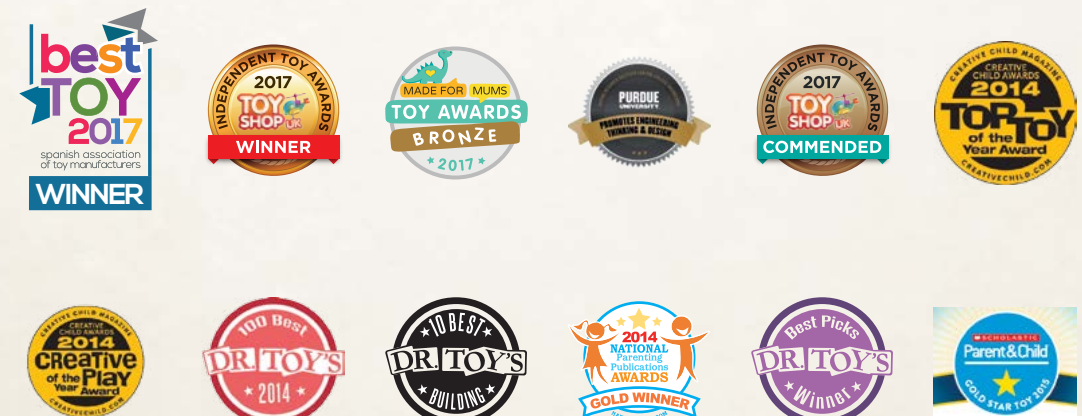

Our Swiss Made products help children of all ages develop and train their minds and imagination. All Geomagworld products are based on the "free building" philosophy, which means open play systems with infinite scope for invention, stimulating creativity and promoting freedom in play.

We are constantly committed to expanding play activities through continuous research and development. Every year we offer new solutions and innovations that help expand our range of products. After developing and upgrading the Classic, Kor, Magicube and Pro-L platforms, which base their play activities on magnetic forces and the players' creativity, we are delighted to present the new Mechanics Gravity line.

Mechanics Gravity is a totally innovative range in which, in addition to magnetism and imagination, we have a new and extra-invisible energy: the force of gravity.

Over the years, Geomag has received a number of international awards that confirm the quality and value of its toys, such as: Dr. Toy "Best Classic Toys" and "Best Children's Products" Award, Toy Retailer Association "Construction Toy of the year", Parents' Choice Award, Nappa "Gold Winner", Top Toy of the year award, Oppenheim Toy Portfolio "Gold Seal", Creative Child Magazine "Preferred Choice Award" "Top Toy of the year", "Creative Play of the year", official recognition from Purdue University, voted "Best Toy 2017" at the Spanish Association of Toy Manufacturers awards and gold medal winner in the Baby category at the "Independent Toy Awards 2017".

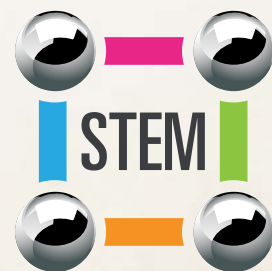

LEARNING BY PLAYING

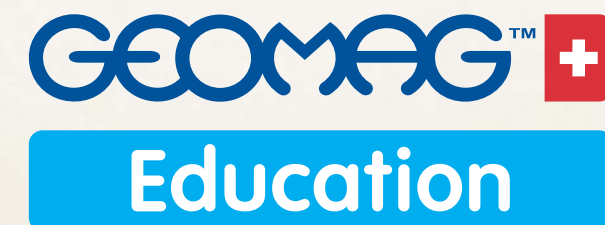

Learning by playing. Most of our products qualify for the STEM category, an acronym for Science, Technology, Engineering, and Mathematics which indicates an interdisciplinary approach to learning through which adults and children apply these subjects in daily life contexts.

Geometric structures, magnetism, gravity, moving mechanisms, all together offer endless construction possibilities and stimulate a scientific and technological way of thinking, bringing children and teens closer to science and technology in a natural and simple way.

These distinctive characteristics present in our platforms allow us to use our imagination to find unique solutions to various problems and they also facilitate the development of hand-eye coordination that evolves simultaneously with spatial and cognitive skills.

The learning approach of our products is reflected in the GEOMAG EDUCATION project, that takes the magical forces that animate our platforms into schools. Through building and fun, students explore specific aspects of their school curriculum subjects, ranging from geometry to physics. They also discover the technological, engineering and mechanical applications through the project's special method and unique content created in collaboration with an international staff of teachers.

PROUD to BE

Geomagworld SA is a SWISS company and all our items are produced in our factory in Novazzano. Creating products in our headquarters allows us to guarantee the highest quality standards.

Every single element, from the magnetic rods to the plastic components, is of exceptional quality thanks to the careful attention given to the choice of materials, ensuring a safe play experience. Our products are also aligned with the most stringent European and international SECURITY norms.

TECHNOLOGY AND INNOVATION animate our products and are the result of continuous research into the use of cutting-edge solutions and high level technical and engineering expertise, present in our new advanced research and development centre.

Environmental sustainability is equally important. Our production process is 100% GREEN as the electricity supply is provided by renewable resources from European hydroelectric power plants. Our commitment is actively contributing to the preservation of natural resources and the reduction of CO2 emissions into the atmosphere.

Our company and our products are also based on the value of SOCIAL RESPONSIBILITY. Among the various activities that promote this value, we have an active project with the Lugano penitentiary which gives inmates the opportunity to progressively integrate into the workplace by working with us on our projects.

Magicube is the new range of products which revolutionizes the Junior Construction category.

This innovative toy is a construction system based on magnetic cubes that attach to each other on all six sides. By using the invisible and magical properties of magnetism, children are able to let their imagination fly and create different shapes, colour combinations and even 3D structures.

Children are at the heart of Magicube, a toy that comes to life with their creativity and allows even the youngest of them to develop their first manual skills with each cube.

KOR is the innovative magnetic construction system developed by Geomagworld. The heart of the toy is a large steel sphere with twenty-six magnetic elements attached to it. The main structure is only the first step: plastic cover pieces can be applied to really let your imagination run wild and build anything from a simple egg to incredible creatures. The KOR components rotate around the sphere to create different shapes, fun animals or alien robots.

Geomag Classic, with its magical forces of magnetism, allows you to build constructions that give free rein to your creativity and thought process. Made up of magnetic rods, steel spheres and different shaped panels, this Swiss Made product is the symbol of the magnetic construction system that has brought worldwide fame and recognition to the Geomag brand. Thanks to these simple components and the magic of magnetism, endless 3D structures can be created with total freedom of imagination and creativity. The Classic range has different product lines (Color, Panels, Spin, Confetti, Glitter, Pink, Glow, Black & White and Wheels). The different panels and colours in the range allow for bigger and more stable constructions, while stimulating your thought process and creativity at the same time.

MECHANICS

Geomag Mechanics is a line of Swiss Made construction toys that, by using magnetic and mechanical forces, stimulates creativity, imagination and intellect. Apart from the classic magnetic rods and steel spheres, Geomag Mechanics has mechanical elements within the constructions widening the play possibilities: some of the parts rotate, triggering a chain reaction generated by the magnets attracting and repelling.

In 2018 we are launching the innovative Mechanics Gravity platform featuring incredible solutions that harness gravity and magnetism to drive all the Mechanics models

pro-L

Geomag Pro-L is the evolution of the classic magnetic construction system. Designed for those who love challenges, the Pro-L line, thanks to the greater strength of its magnets, allows you to create ever more complex models and structures, giving greater scope to your imagination. The visible polarity indicator on the rods means you get to understand the true potential of magnetism and can build constructions that allow you to push to the edge of the laws of physics with greater ease.
