

PUZZLES

2020

The Larsen Philosophy

Since we started making puzzles in 1953, our philosophy has always been to make the highest quality children puzzles we can. We have always manufactured all of our puzzles ourselves in our factory on the southern coast of Norway. This way we have full control over both the quality and materials of our puzzles to make sure they meet our strict requirements.

Our puzzles should not just be fun to play with and beautiful to look at with colourful illustrations, but should also encourage learning. The act of puzzling help develop fine motor skills, cognitive skills, and shape recognition.

In addition, we have many educational puzzles for all ages on topics such as the letters and numbers, reading, maths and learning the clock. Maps and geography have always been a focus area for us, and we produce over 100 puzzles with maps of countries, continents, states, and various other areas. We also have many scientific and historical puzzles for various subjects such as animals, transportation, space, climate and nature.

All our puzzles are made with tray and a permanent edge that holds the pieces in place while puzzling. This also removes the need for a bulky storage box, so the puzzles are very easy to store. The imprint of the pieces are always visible in the tray. And since most of our jigsaw puzzles have easily distinguishable pieces, the tray can be a helpful guide. There are always one or more small holes in the tray to make it easier to remove the first piece when starting.

The MAXI puzzle dimensions are 36.5 x 28.5 cm and it's 0.5 cm thick. While this doesn't sound like a lot, it's thicker and sturdier than most tray jigsaw puzzles. This makes it easier to handle for puzzlers of all ages, while also making it very long-lasting and durable.

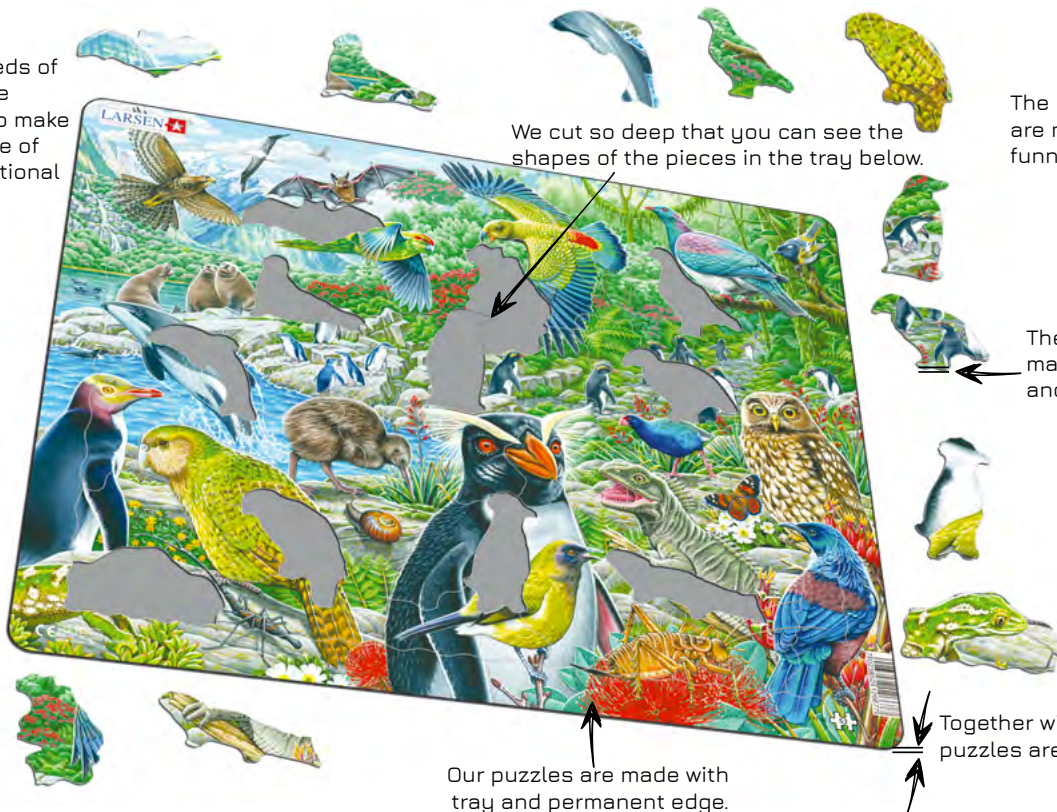

We only use 100% recycled cardboard specifically designed for puzzles, and our puzzles of course meet all the stringent safety requirements for toys.

Below each picture in this catalog you will find a reference to our web page. When you look up the references on larsen.no you will find pictures of all the puzzles in the different available versions and languages. If you use the pdf version of the printed catalog then just click on the link. Facts and information about each puzzle, such as barcodes, information about the design and about the shapes of the pieces in the puzzle can also be found on our www.larsen.no

The web page is updated continuously and will always contain the latest new puzzles, information about changes in designs and the complete range of puzzles available. You will find puzzles on our web page which are not in the printed catalog, such as school sets for reading and math, maps of countries, other maps and more.

Facts about our Frame and Tray Jigsaw Puzzles

We use hundreds of specially made cutting tools to make our great range of fun and educational puzzles.

We cut so deep that you can see the shapes of the pieces in the tray below.

The puzzle pieces are made in many funny shapes

The puzzle pieces are made of 2,5 mm thick and sturdy board.

Our puzzles are made with tray and permanent edge.

Together with the tray the puzzles are totally 4,4 mm thick.

There are many reasons for choosing Larsen Puzzles:

- The youngest children develop their motor skills with puzzle-pieces they will remember.
- Older kids play and learn about many interesting themes.
- Self-checking pieces encourage the children and help them to concentrate.
- Extra thick and solid pieces.
- Made in Europe of recycled board.
- The Larsen Puzzle range has been developed through 60 years.
- There are lots of thoughts and considerations behind every puzzle we make.

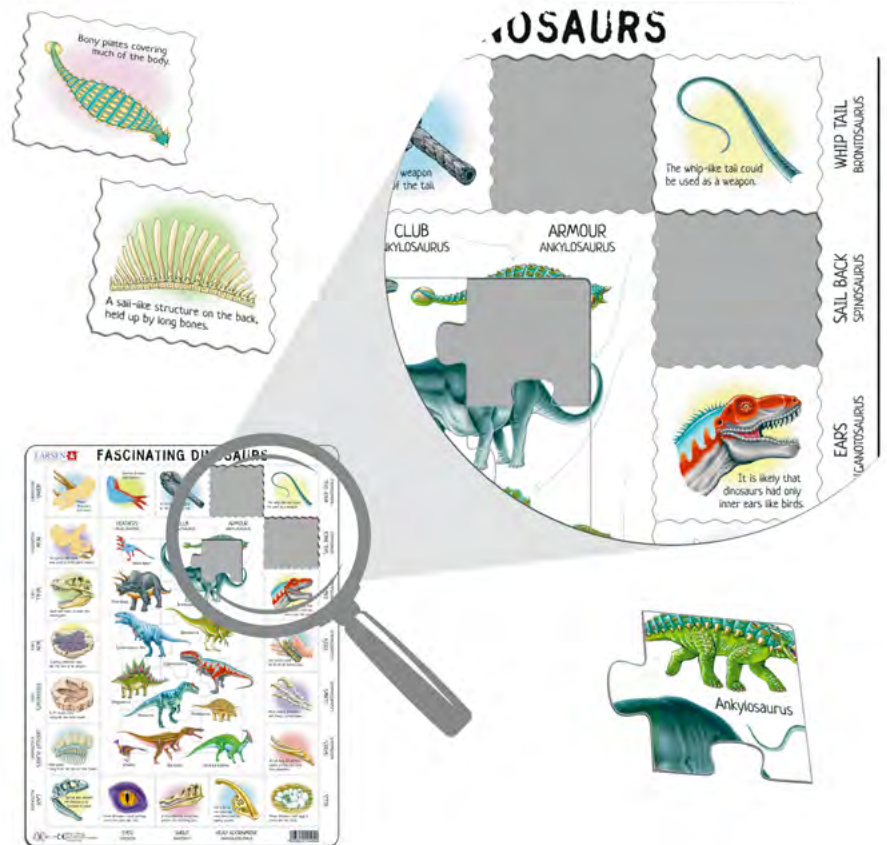

Double challenge Puzzles

Our puzzles have a frame along the outer edges, but some also have an inner frame.

Within the outer frame are pieces with details relating to the image within the fixed inner frame.

1. Put together the central puzzle within the inner frame.
2. Place the pieces between the two frames by their relating text.
3. Each piece only fits in its proper place.

We have several double challenge Puzzles with Maps + Flags, Learning English, The body and Nature, in addition to this new one with Dinosaurs.

Quiz Puzzle

1. There is a question on each piece, and the pieces only fits by their correct answers.
2. The children will know immediately whether they are right or wrong.
3. These puzzles are effective learning tools, because the children can work at their own pace and they develop the ability to concentrate.

We have several Problem Puzzles with flags, mathematics, clock, traffic signs, letters and words.

Motive puzzles

1. When playing with puzzles with irregular pieces, the child will look for pieces with the right shape, and place them on the tray where they belong.
2. They train the fine motor skills in their hands and eye-hand coordination.
3. Many children assemble the same puzzle so many times that they can almost puzzle it blindfolded. They remember the shapes and colors and know where the pieces fit.
4. Our puzzles are designed to be used again and again, and they are often passed down from one generation to the next.

Contour pieces are cut along the contours of the image.

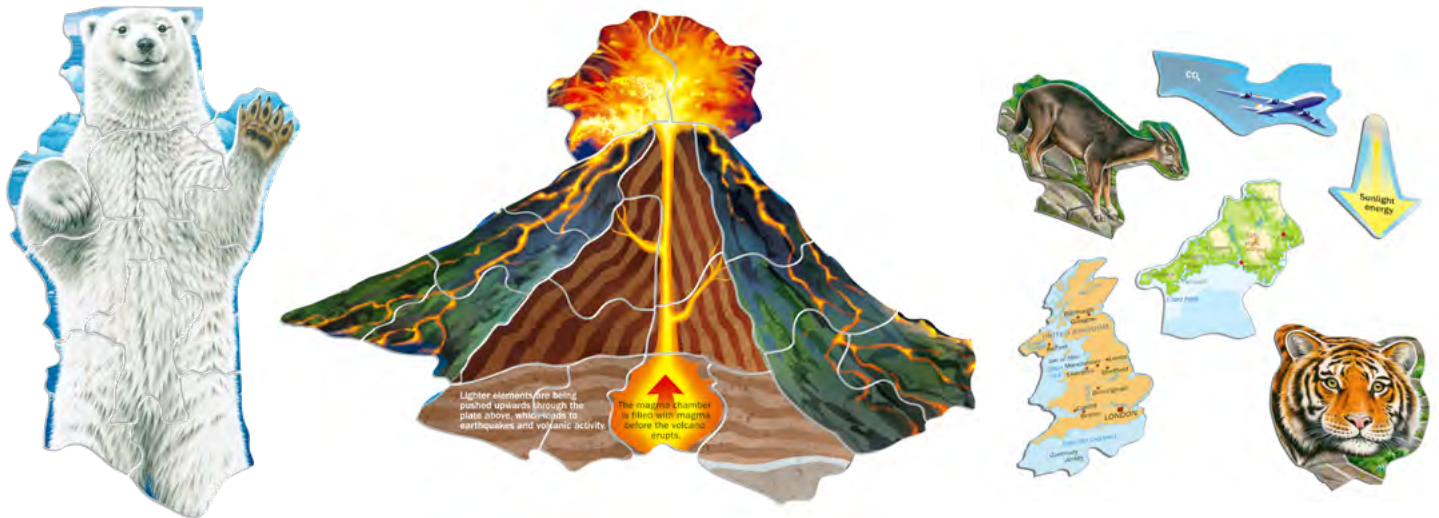

Figure pieces are shaped like animals, vehicles, clothes etc.

Interlocking pieces.

Since the puzzle pieces look similar, just look at the colors and details in the picture to put the puzzle together.

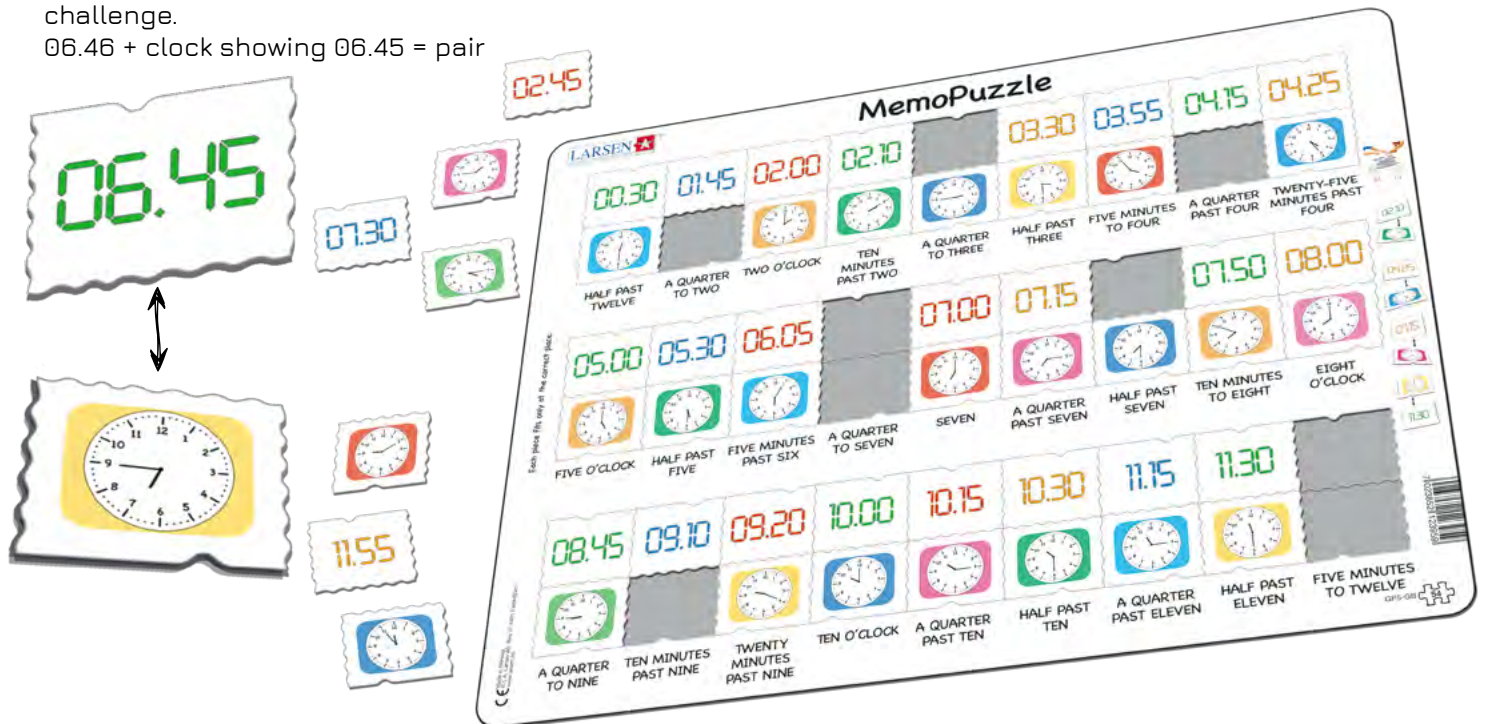

MemoPuzzle

1. At first MemoPuzzle can be used as a puzzle to learn for example the clock.
All the pieces are unique, even though they look alike, and they only fit in one spot.
2. Later, the pieces can be used to play Memo.
A pair consists of two different pieces that naturally belong together.

This is a Memo game with an extra challenge.

06.46 + clock showing 06.45 = pair

We have several MemoPuzzles, to help learn the letters, the clock, geography, math, and animals.
Have fun and learn, and you will remember what you learned!

Three different sizes.

We create puzzles with only a few pieces for the very young ones and difficult puzzles for the older children. Young children prefer puzzles that are not too difficult. They would rather put together a puzzle many times than to strive with one that is difficult.

We offer puzzles in 3 different sizes with many different numbers of pieces. It is important that the illustration and the puzzle game's difficulty match each other, and that they fit the right age group.

MAXI puzzle is our largest format:
28.5 x 36.5 cm.
15 to 140 pieces.

Two MIDI puzzles are made together.
Size 28.5 x 18.3 cm.
8 to 70 pieces.

Four MINI puzzle are made together.
Size 18.3 x 14.3 cm.
5 to 14 pieces.

One of our most important product lines has always been the map puzzles, and we have now completed our range of physical maps of the continents Europe, Africa, Asia, North America, South America and Australia.

The puzzle pieces are cut along borders and coastlines, and some of the pieces are shaped like animals and other figures. Around the maps are pictures of animals living in the continent.

The political maps have the names of the countries, cities, rivers etc., and the flags of each country. When all the puzzle pieces look similar, you have to read the names and look at the colours to put the puzzle together.

For children who have not yet developed the motoric precision in their hands, we have made puzzles where each piece lies steadily within its own frame. Thus the children can place each piece without bumping into and moving the neighbouring pieces away from their places.

Our small MINI puzzles are perfect for our youngest.

Custom made puzzles

Jigsaw puzzles with tray and permanent edge

Puzzles is an exclusive, unique and fun way to show off your product, brand or message. It's a presentation that does not disappear in the flow of today's information age. A good quality jigsaw puzzle is used time and time again, and it is great fun for children and grown-ups alike!

All our puzzles are made from 100% recyclable materials (high density recycled paperboard and paper) and produced in our factory in Flekkefjord, Norway. They fully meet the requirements for the CE mark and EN 71.

You provide the illustration/drawing/picture you want, and we can take care of the rest. There are 3 different sizes to choose from, each with many different cutting tools, anywhere from 5 to 140 pieces and with various shapes, ranging from the traditional "puzzle grid" to pieces shaped as animals or other figures. This makes it possible to find the correct difficulty level for your intended audience. Let our extensive experience help you decide on the right size and cutting tool!

36,5 cm

MAXI is our largest size and measures

36.5 cm x 28.5 cm.

Our MAXI cutting tools have number of pieces ranging from 15 all the way up to 140.

Jigsaw puzzles in MAXI format are great as sales articles.

Puzzles with pictures of attractions, hotels, ships etc. can be sold as souvenirs, so you can get paid for your own advertisement. Or, given as gifts to good customers.

28,5 cm

MIDI is our in-between size and measures 28.5 cm x 18.3 cm, half the size of a MAXI, and double the size of a MINI puzzle. The number of pieces range from 8 to 70.

Puzzles in MIDI format are suitable as hand-out items. We recommend this format to banks and sellers of everything from the smallest items to cars and houses.

18,3 cm

MINI is our smallest size and measures 18.3 cm x 14.3 cm, half the size of a MIDI, and quarter the size a MAXI puzzle. The number of pieces range from 5 to 24.

Puzzles in MINI format are especially suitable as hand-out items on fairs, in airplanes, trains and other places where space is tight or when large numbers of puzzles are used combined with a low budget.

1. Choose your size
2. Contact us to get a price quote, e-mail: puzzle@larsen.no
3. Send us one or more good quality and high resolution illustrations/drawings/pictures and logo or send us a ready-made layout.
4. We send an electronic PDF proof with cutting marks and all the necessary regulatory information added
5. Once approved, we print, produce and shrinkwrap the puzzles and ship them to you, usually in 2-3 weeks
The puzzle pieces are 2.5 mm thick. The total thickness of the puzzle, including tray, is 4.4 mm.

Where we are

We are located in Flekkefjord, an idyllic small town in Southern Norway, midway between the larger cities of Kristiansand and Stavanger. We've been here since the start in 1947. The blue arrow in the picture shows where our puzzle production started in 1953 (Bekkeveien). In 1975 we moved a little further away from the town center, to a brand new factory in the Svegeskogen industrial area (shown with a red arrow).
